

**Role:** AI Lead

**Experience:** 4+ years in AI/ML, with hands-on development & leadership

---

### Key Responsibilities:

- Architect, develop, and deploy AI/ML solutions across various business domains.
  - Research and implement cutting-edge deep learning, NLP, and computer vision models.
  - Optimize AI models for performance, scalability, and real-time inference.
  - Develop and manage data pipelines, model training, and inference workflows.
  - Integrate AI solutions into microservices and APIs using scalable architectures.
  - Lead AI-driven automation and decision-making systems.
  - Ensure model monitoring, explainability, and continuous improvement in production.
  - Collaborate with data engineering, software development, and DevOps teams.
  - Stay updated with LLMs, transformers, federated learning, and AI ethics.
  - Mentor AI engineers and drive AI research & development initiatives.
- 

### Technical Requirements:

- **Programming:** Python (NumPy, Pandas, Scikit-learn).
  - **Deep Learning Frameworks:** TensorFlow, PyTorch, JAX.
  - **NLP & LLMs:** Hugging Face Transformers, BERT, GPT models, RAG, fine-tuning LLMs.
  - **Computer Vision:** OpenCV, YOLO, Faster R-CNN, Vision Transformers (ViTs).
  - **Data Engineering:** Spark, Dask, Apache Kafka, SQL/NoSQL databases.
  - **Cloud & MLOps:** AWS/GCP/Azure, Kubernetes, Docker, CI/CD for ML pipelines.
  - **Optimization & Scaling:** Model quantization, pruning, knowledge distillation.
  - **Big Data & Distributed Computing:** Ray, Dask, TensorRT, ONNX.
  - **Security & Ethics:** Responsible AI, Bias detection, Model explainability (SHAP, LIME).
- 

### Preferred Qualifications:

- Experience with real-time AI applications, reinforcement learning, or edge AI.
- Contributions to AI research (publications, open-source contributions).
- Experience integrating AI with ERP, CRM, or enterprise solutions.
